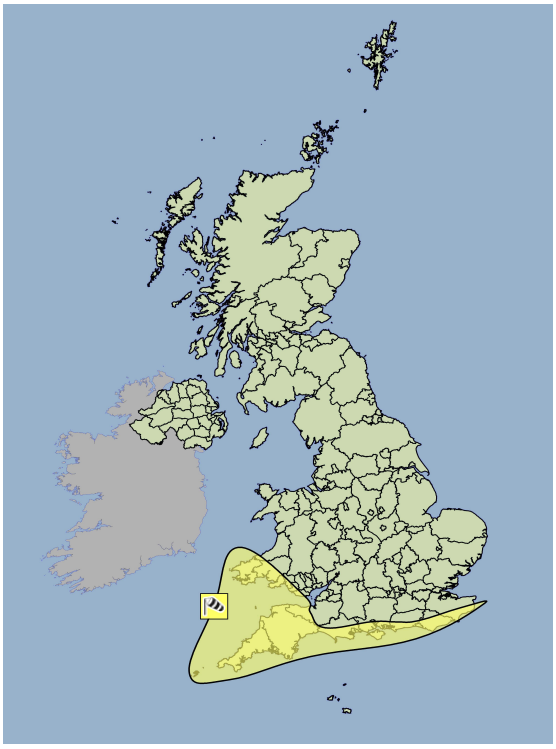
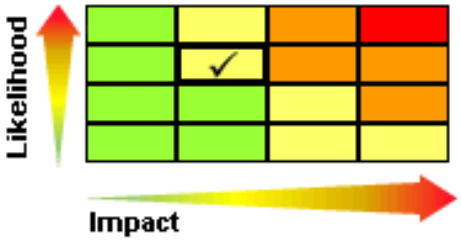
National Severe Weather Warning Service





Chief Forecasters Assessment
A rather deep and complex area of low pressure will bring windy conditions widely on Tuesday, but these winds will be strongest near the south coast in the morning, then more generally across south west England and parts of South Wales later in the day. Such winds would be quite normal in winter but rather less so (though not exceptional) in May, and with trees well into leaf now, and some extra holiday traffic around, some minor impacts are likely.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **09:00 on Tue, 05th May 2015** until **19:00 on Tue, 05th May 2015**

Southwesterly winds will gust to over 50 mph at times in parts of southern England and south Wales, and to 60 mph in some exposed coastal sites. The public should be aware that these gusts may cause minor damage to trees, and make travel tricky for the likes of towing vehicles.
